RESTRICTED—Security Information

WARNING.—Material on the reverse of this sheet may carry a classification of CONFIDENTIAL, SECRET, or TOP SECRET.

EXPLANATORY NOTE

Date of Info.—The date or dates on which, or between which, the events described in the report occurred or the conditions described existed.

Place Acquired.—The place where the information was first acquired by a controlled individual. A date following in parentheses indicates when the information was acquired.

Source Description.—A description of the individual from whom, and, when pertinent, of any other individual through whom the information was received.

Source Evaluation.—An indication of the reliability of a source, expressed either verbally or by means of a letter inserted parenthetically in the source description. Reliability includes competence, objectivity, honesty, and other factors likely to affect the accuracy of the source's reports. The source evaluation is definitive in the sense that it reflects everything known about the source, including his previous record of reporting. If the report was received from one source through another, each is evaluated separately. The key follows:

A: Completely reliable. B: Usually reliable. C: Fairly reliable. D: Not usually reliable. E: Not reliable (applied to sources of doubtful honesty or loyalty, regardless of their competence). F: Reliability cannot be judged (applied to untested or insufficiently tested sources).

Appraisal of Content.—A tentative opinion by the issuing office as to the probable truth of the report, expressed either verbally or by means of a number from 1 through 6. It is based on immediately available information which may or may not be complete, and does not purport to constitute final evaluation. The key follows:

1: Confirmed by other independent and reliable sources. 2: Probably true. 3: Possibly true. 4: Doubtful. 5: Probably false. 6: Cannot be judged. Documentary: Based on an original document which has been seen by a staff member of the issuing office.

The appraisal of content is independent of the source evaluation. A "B" source may submit a "4" report; and "E" source may submit a "1" report. Reliable sources tend to produce accurate reports, and conversely a series of accurate reports tends to establish the reliability of the source, but there is no necessary correlation in any particular instance.
